Experience

Front-end Developer

|

WinTech JSC, HCMC

Apr 2022 - Apr 2023

- Built a design system for the company, which included design principles, components, and templates. The design system was used to create a consistent and scalable user experience across all of the company's products.
- Designed a landing page for a company's website, improving brand awareness by providing visitors with information about the company and its products or services. This resulted in a 20% increase in conversions.
- Analyzed requirements, designed and Developed an E-coaching application for my company's leadership coaches, which allows the coaching process to be delivered effectively and efficiently to each individual.
- Developed a web-based human resources management (HRM) application to help the HR department manage human resources more efficiently, saving time and resources for the company.
- Proactively communicate with teams to ensure efficient and timely delivery of projects.
- Technologies: ReactJS, Tailwind.

Front-end Developer

|

Thang Loi Group, HCMC

Dec 2020 - Apr 2022

- Collaborated with the Marketing team to build the E-Thiep application, which personalizes and automatically sends invitations with QR codes for check-in, mini-games, and enhances the customer experience at sales events.
- Developed applications to serve customer care, management, and internal operations:
 - Call Center: Developed a call center system that manages calls and customer call-related information. This system helps the company's Customer Service department to take care of customers more easily and effectively.
 - BaseCRM: Developed a customer relationship management (CRM) system that manages customer data in a central place. This system provides the ability to store, track, and validate customer data, optimize customer engagement, and build better relationships.
 - Asset Management: Developed an asset management system that manages, catalogs, tracks, and maintains an company's assets. This system helps the company to track the location and condition of its assets, ensure that assets are properly maintained.
- Technologies: HTML, Bootstrap, Javascript.

- Developed a landing page for a company's website and mobile application – an individual assistant aims to financial management and give advice.
- Technologies: NextJS; React Native.
